

Harvest Fine Foods Eco-ssential product range

Harvest Fine Foods is a leading, food service company in the south of England and we pride ourselves on being committed to delivering a high quality, reliable and responsible service to all our customers.

The Harvest team are friendly, helpful, experienced and knowledgeable, creating flexible, innovative solutions for our customers catering requirements.

We believe in delivering a first class service, tailored to each client that ensures we are the first choice for passionate chefs.

Throughout Harvest Fine Foods we are always striving to ensure we are competitive in the marketplace and provide the best value.

We take our environmental responsibility very seriously and have launched a range of biodegradable and compostable products that will reduce your carbon footprint.

To learn more about how we are reducing our environmental impact, visit our website: www.harvestfinefoods.co.uk/our-strength/corporate-social-responsibility/

You can be assured that you are working with professionals who understand you and your business.

We say what we mean and do what we say.

Each piece of cutlery is smooth, odourless and taste-free. It is made from sustainably sourced Birchwood, which is a hardwood that does not split or splinter easily.

Wooden knives
1 x 100 165mm | Code: 48877
100% compostable & biodegradable

Wooden forks
1 x 100 160mm | Code: 79736
100% compostable & biodegradable

Wooden teaspoons
1 x 100 110mm | Code: 54955
100% compostable & biodegradable

Wooden spoons
1 x 100 160mm | Code: 24117
100% compostable & biodegradable

Chip tray
7" x 5", 1 x 50 | Code: 13572
Manufactured using 'Bagasse'

Hinged container
9" x 6", 1 x 50 | Code: 65172
Manufactured using 'Bagasse'

Super Rigid Plates
9", 1 x 50 | Code: 38226
100% biodegradable, compostable

These products are more energy efficient to produce, in comparison to pulping wood for paper, or manufacturing polystyrene from oil. They are also freezer and microwave safe.

Red, yellow and blue paper straws
1 x 100 | Code: 29434
100% biodegradable and compostable

Black paper straws
1 x 150 | Code: 66859

The straws are produced with environmentally friendly paper and manufactured from high quality craft paper in an assortment of colours.

Paper cups
12oz, 1 x 50 | Code: 30826
PLA coated, 100% compostable

Paper cups
8oz, 1 x 50 | Code: 78616
PLA coated, 100% compostable

Environmental Benefits Explained...

What does PLA stand for?

PLA stands for Polylactic acid, which is a bioplastic made from lactic acid. The lactic acid is derived from renewable sources. This type of bioplastic naturally degrades when exposed to the environment.

What does it mean when packaging is biodegradable?

Biodegradable packaging breaks down quickly and returns to nature in the presence of oxygen, without needing special conditions to do so. This packaging has the ability convert into carbon dioxide, water, mineral salts or new biomass. It will not lay in a landfill for hundreds of years.

What is compostable packaging?

Compostable packaging breaks down within a few months when placed in a compost pile or facility. It benefits the soil by forming a decayed organic substance, to create a nutrient-rich fertiliser. Like biodegradable packaging, compostable packaging will not lay in landfill for hundreds of years.

What is 'Bagasse'?

Bagasse is a natural by-product of sugarcane refinement. It is the fibre that remains after sugarcane stalks are crushed to extract their juice. It requires minimal processing and elemental chlorine free (ECF) bleaching to turn it into a woven high-strength paper that is biodegradable and compostable. These types of products are more energy efficient to produce in comparison to pulping wood for paper, or manufacturing polystyrene from oil.

To learn more about environmental benefits visit these websites: www.recycling-guide.org.uk, www.creativemechanisms.com or www.thefoodrush.com

Our 100% compostable products decompose in 4-6 months

Products that are manufactured using Bagasse are super rigid
